Acing Admissions is the only guide you need to help navigate the US undergraduate studies application process. Written with the international student in mind, Acing Admissions outlines frameworks for developing a college list, provides a step-by-step guide to submitting your application and describes the range of financial aid options available to international students. The book also gives detailed timelines with checkpoints for students who want to start planning as early as 8th grade. Practical advice is conveyed through anecdotes and case studies featuring real applicant stories, based on the authors' years of experience running an education consulting practice for students and families living

outside the US.

Since the emergence of climate and global warming onto the international agenda, research in sustainability has been underpinned by the development in energy and environmental science. Highlighted 30 years ago by the Brundtland Commission, 'sustainable development' was defined as: meeting the needs of the present without compromising the ability of future generations to meet their own needs. This has very much defined the scope and aims of this conference. This conference proceedings book contains the selected papers presented in the 2015 International Conference on Sustainable Development (ICSD2015) held in September 25-27, 2015, in Wuhan, Hubei, China. The conference positions itself as an international forum for researchers all over the world to come together to share and discuss their findings and contributions in all aspects of sustainability; including theory, methodology and applications covering a wide spectrum of topics and issues. The conference proceedings put together a total of 119 papers in sustainable development, covering issues in environmental, energy, and economical aspects of the subjects.

This book consists of one hundred and seventeen selected papers presented at the 2015 International Conference on Electronics, Electrical Engineering and Information Science (EEEIS2015), which was held in Guangzhou, China, during August 07-09, 2015. EEEIS2015 provided an excellent international exchange platform for researchers to share their knowledge and results and to explore new areas of research and development. Global researchers and practitioners will find coverage of topics involving Electronics Engineering, Electrical Engineering, Computer Science, Technology for Road Traffic, Mechanical Engineering, Materials Science and Engineering Management. Experts in these fields contributed to the collection of research results and development activities. This book will be a valuable reference for researchers working in the field of Electronics, Electrical Engineering and Information Science. Contents: Electronics Engineering, Electrical Engineering, Computer Science and Application Technology for Road Traffic, Mechanical Engineering, Material Science and Material Processing Technology, Engineering Management. Readership: Researchers working in the field of Electronics, Electrical Engineering and Information Science.

This ground-breaking book focuses on the 'forgotten refugees', detailing people with disabilities who have crossed borders in search of protection from disaster or human conflict. The authors explore the intersection between one of the oldest international human rights treaties, the 1951 Convention relating to the Status of Refugees, with one of the newest: the Convention on the Rights of Persons with Disabilities (CRPD). Drawing on fieldwork in six countries hosting refugees in a variety of contexts - Malaysia, Indonesia, Pakistan, Uganda, Jordan and Turkey - the book examines how the CRPD is (or should) be changing the way that governments and aid agencies engage with and accommodate persons with disabilities in situations of displacement. The timeliness of the book is underscored by the adoption in mid-2016 of the UN Charter on Inclusion of Persons with Disabilities in Humanitarian Action adopted at the World Humanitarian Summit.

Many enterprises are moving their applications and IT services to the cloud. Better risk management results in fewer operational surprises and failures, greater stakeholder confidence and reduced regulatory concerns; proactive risk management maximizes the likelihood that an enterprise's objectives will be achieved, thereby enabling organizational success. This work methodically considers the risks and opportunities that an enterprise taking their applications or services onto the cloud must consider to obtain the cost reductions and service velocity improvements they desire without suffering the consequences of unacceptable user service quality.

Whereas Area Studies and cross-border cooperation research conventionally demarcates groups of people by geographical boundaries, individuals might in fact feel more connected by shared values and principles than by conventional spatial dimensions. Knowledge Production, Area Studies and Global Cooperation asks what norms and principles lead to the creation of knowledge about cross-border cooperation and connection. It studies why theories, methods, and concepts originate in one place rather than another, how they travel, and what position the scholar adopts while doing research, particularly 'in the field'. Taking case studies from Asia, the Middle East and North Africa, the book links the production of alternative epistemologies to the notion of global cooperation and reassesses the ways in which the concept of connectedness can be applied at the translocal and individual rather than the formal international and collective level. Knowledge Production, Area Studies and Global Cooperation provides an innovative and critical approach towards established means of producing knowledge about different areas of the world, demonstrating that an understanding of pluri-local connectivity should be integrated into the production of knowledge about different areas of the world and the behavioural dimension of global cooperation. By shifting the view from the collective to the individual and from the formal to often invisible patterns of connectedness, this book provides an important fresh perspective which will be of interest to scholars and students of Area Studies, Politics, International Relations and Development Studies.

This book, the first in series of publications by TestExpert, has everything a future graduate student may need: from recommendation letters and personal statement to quality and of schools and graduate degrees, the book is a complete admission guide for MA/MS, PhD, MBA and Law students.

This book constitutes the thoroughly refereed conference proceedings of the Fourth International

Workshop on Risk Assessment and Risk-Driven Quality Assurance, RISK 2016, held in conjunction with ICTSS 2016, in Graz, Austria, in October 2016. The revised 9 full papers were carefully reviewed and selected from 11 submissions. They focus on research studying, developing and evaluating innovative techniques, tools, languages and methods risk assessment and risk-driven quality engineering. The papers are organized topical sections: security risk management; security risk analysis; risk-based testing.

Introduces risk assessment with key theories, proven methods, and state-of-the-art applications Risk Assessment: Theory, Methods, and Applications remains one of the few textbooks to address current risk analysis and risk assessment with an emphasis on the possibility of sudden, major accidents across various areas of practice—from machinery and manufacturing processes to nuclear power plants and transportation systems. Updated to align with ISO 31000 and other amended standards, this all-new 2nd Edition discusses the main ideas and techniques for assessing risk today. The book begins with an introduction of risk analysis, assessment, and management, and includes a new section on the history of risk analysis. It covers hazards and threats, how to measure and evaluate risk, and risk management. It also adds new sections on risk governance and risk-informed decision making; combining accident theories and criteria for evaluating data sources; and subjective probabilities. The risk assessment process is covered, as are how to establish context; planning and preparing; and identification, analysis, and evaluation of risk. Risk Assessment also offers new coverage of safe job analysis and semi-quantitative methods, and it discusses barrier management and HRA methods for offshore application. Finally, it looks at dynamic risk analysis, security and life-cycle use of risk. Serves as a practical and modern guide to the current applications of risk analysis and assessment, supports key standards, and supplements legislation related to risk analysis Updated and revised to align with ISO 31000 Risk Management and other new standards and includes new chapters on security, dynamic risk analysis, as well as life-cycle use of risk analysis Provides in-depth coverage on hazard identification, methodologically outlining the steps for use of checklists, conducting preliminary hazard analysis, and job safety analysis Presents new coverage on the history of risk analysis, criteria for evaluating data sources, risk-informed decision making, subjective probabilities, semi-quantitative methods, and barrier management Contains more applications and examples, new and revised problems throughout, and detailed appendices that outline key terms and acronyms Supplemented with a book companion website containing Solutions to problems, presentation material and an Instructor Manual Risk Assessment: Theory, Methods, and Applications, Second Edition is ideal for courses on risk analysis/risk assessment and systems engineering at the upper-undergraduate and graduate levels. It is also an excellent reference and resource for engineers, researchers, consultants, and practitioners who carry out risk assessment techniques in their everyday work.
