The AASM Manual for the Scoring of Sleep and Associated Events: Rules, Terminology and Technical Specifications is the definitive reference for the evaluation of polysomnography (PSG) and home sleep apnea testing (HSAT). This comprehensive resource provides rules for scoring sleep stages, arousals, respiratory events during sleep, movements during sleep and cardiac events. This manual is indispensable for sleep technologists, and it is an essential reference for physicians who interpret sleep studies -- Provided by the publisher.

Endorsed by the American Association of Sleep Technologists (AASST) and widely used as the go-to text in the field, *Fundamentals of Sleep Technology, 3rd Edition*, provides comprehensive, up-to-date coverage of polysomnography and other technologies in the evaluation and management of sleep disorders in adults and children. This edition has been extensively updated and expanded to reflect current practice, the latest technology, and the broader

roles and responsibilities of the sleep technologist. Content is enhanced with new illustrations, tables, and treatment algorithms. This textbook, written by and for sleep technologists, is the ideal resource for those practicing in the field of sleep medicine or preparing for licensing exams in sleep technology.

Written for sleep technologists, *Clinical Atlas of Polysomnography* provides basic information regarding normal sleep, sleep disorders, and electrophysiology that is outside of the scope of the AASM manual (*AASM Manual for the Scoring of Sleep and Associated Events*). It aims to act as a guide through the fundamental aspects of, for example, types of overnight sleep study, establishing a sleep laboratory, preparing the patient for a sleep evaluation study, placement of electrodes and leads, and the scientific aspects of such placement, i.e., why they are placed at that particular position. This information will be very useful in those parts of the globe where formal training in sleep technology is not yet available. Many further chapters focus on depicting real-time illustrations of sleep data as captured in the sleep laboratory and the scoring of recording data. Information regarding common montages, artifacts, and troubleshooting in the sleep laboratory will facilitate the reader's journey as a trainee sleep technologist. While scoring sleep recordings, the "When you score the data" histogram can provide a great deal of useful information, and this has been explained in detail in this book. Most importantly, it is prudent to be able to write

reports that are both informative and easy to understand by physicians who do not have advanced knowledge of sleep medicine. A chapter has been dedicated to explaining this in detail. Lastly, the authors have provided ready-made forms, questionnaires, and documents that can either be used as they are or with some modifications. This up-to-date and comprehensive volume will be an invaluable guide for technicians and physicians who wish to practice sleep medicine and will be useful for sleep technology and physician training programs. The volume is intended to complement, not be a substitute for, the AASM scoring manual, as many areas that are covered in the manual are not covered here.

Formulate treatment plans with confidence when you consult *Sleep Disorders in Neurology*, a helpful overview of both common and rare neurological disorders that are frequently accompanied by significant sleep disturbances. This concise guide explains when to consult a sleep specialist in managing a particular sleep disorder and draws on the expertise of neurologists who specialize in the disorders under discussion. This practical guide is fully illustrated and easily digested, providing a counterpoint to large encyclopedic reference volumes. The authors take you from history taking and diagnostic testing, to pharmacological and non-pharmacological treatment options, and are joined by disease sub-specialists in the chapters on disease specific sleep disturbances and the effects of common neurological medications on sleep. This book is essential for sleep medicine specialists, as well as for clinicians and health care professionals not specifically trained in sleep medicine, but who nevertheless need to manage neurologically damaged patients with increasingly recognized sleep-wake disturbances.
