From newspapers to NASA, Mac users around the world use AppleScript to automate their daily computing routines. Famed for its similarity to English and its ease of integration with other programs, AppleScript is the perfect programming language for time-squeezed Mac fans. As beginners quickly realize, however, AppleScript has one major shortcoming: it comes without a manual. No more. You don't need a degree in computer science, a fancy system administrator title, or even a pocket protector and pair of nerdy glasses to learn the Mac's most popular scripting language; you just need the proper guide at your side. AppleScript: The Missing Manual is that guide. Brilliantly compiled by author Adam Goldstein, AppleScript: The Missing Manual is brimming with useful examples. You'll learn how to clean up your Desktop with a single click, for example, and how to automatically optimize pictures for a website. Along the way, you'll learn the overall grammar of AppleScript, so you can write your own customized scripts when you feel the need. Naturally, AppleScript: The Missing Manual isn't merely for the uninitiated scripter. While its hands-on approach certainly keeps novices from feeling intimidated, this comprehensive guide is also suited for system administrators, web and graphics professionals, musicians, scientists, mathematicians, engineers, and others who need to learn the ins and outs of AppleScript for their daily work. Thanks to AppleScript: The Missing Manual, the path from consumer to seasoned scripter has never been clearer. Now you, too, can automate your Macintosh in no time.

AppleScript in a Nutshell is the first complete reference to AppleScript, the popular programming language that gives both power users and sophisticated enterprise customers the important ability to automate repetitive tasks and customize applications. As the Macintosh continues to expand and solidify its base in the multimedia and publishing industries, AppleScript is the tool of choice on this platform for creating sophisticated time- and money-saving workflow applications (applets). These applets automate the processing and management of digital video, imaging, print, and web-based material. AppleScript is also gaining a foothold in scientific programming, as technical organizations adopt G4 CPU-based systems for advanced computing and scientific analysis. Finally, "power users" and script novices will find that AppleScript is a great everyday Mac programming tool, similar to Perl on Windows NT or Unix. In this well-organized and concise reference, AppleScript programmers will find: Detailed coverage of AppleScript Version 1.4 and beyond on Mac OS 9 and Mac OS X. Complete descriptions of AppleScript language features, such as data types, flow-control statements, functions, object-oriented features (script objects and libraries), and other syntactical elements. Descriptions and hundreds of code samples on programming the various "scriptable" system components, such as the Finder, File Sharing, File Exchange, Network scripting, Web scripting, Apple System Profiler, the ColorSync program, and the numerous powerful language extensions called "osax" or scripting additions. Most other AppleScript books are hopelessly out of date. AppleScript in a Nutshell covers the latest updates and improvements with practical, easy to understand tips, including: Using AppleScript as a tool for distributed computing, an exciting development that Apple Computer calls "program linking over IP." Programmers can now do distributed computing with Macs over TCP/IP networks, including controlling remote applications with AppleScript and calling AppleScript methods on code libraries that are located on other machines. Using the Sherlock find application to automate web and network searching. Insights on scripting new Apple technologies such as Apple Data Detectors, Folder Actions, Keychain Access, and Apple Verifier. AppleScript in a Nutshell is a high-end handbook at a low-end price--an essential desktop reference that puts the full power of this user-friendly
