Ten years ago, world-renowned professors W. Chan Kim and Renee Mauborgne broke ground by introducing "blue ocean strategy," a new model for discovering uncontested markets that are ripe for growth. In this bound version of their bestselling Harvard Business Review classic article, they apply their concepts and tools to what is perhaps the greatest challenge of leadership: closing the gulf between the potential and the realized talent and energy of employees. Research indicates that this gulf is vast: According to Gallup, 70% of workers are disengaged from their jobs. If companies could find a way to convert them into engaged employees, the results could be transformative. The trouble is, managers lack a clear understanding of what changes they could make to bring out the best in everyone. In this article, Kim and Mauborgne offer a solution to that problem: a systematic approach to uncovering, at each level of the organization, which leadership acts and activities will inspire employees to give their all, and a process for getting managers throughout the company to start doing them. Blue ocean leadership works because the managers' "customers"--that is, the people managers oversee and report to--are involved in identifying what's effective and what isn't. Moreover, the approach doesn't require leaders to alter who they are, just to undertake a different set of tasks. And that kind of change is much easier to implement and track than changes to values and mind-sets. The Harvard Business Review Classics series offers you the opportunity to make seminal Harvard Business Review articles a part of your permanent management library. Each highly readable volume contains a groundbreaking idea that continues to shape best practices and inspire countless managers around the world--and will have a direct impact on you today and for years to come.

As established markets become less profitable, companies increasingly need to find ways to create and capture new markets. Despite much investment and commitment, most firms struggle to do this. What, exactly, is getting in their way? The authors of the best-selling book Blue Ocean Strategy have spent over a decade exploring that question. They have seen that the trouble lies in managers' mental models--ingrained assumptions and theories about the way the world works. Though these models may work perfectly well in mature markets, they undermine executives' attempts to discover uncontested new spaces with ample potential (blue oceans) and keep companies firmly anchored in existing spaces where competition is bloody (red oceans). This article describes how to break free of these red ocean traps. To do that, managers need to: (1) Focus on attracting new customers, not pleasing current customers; (2) Worry less about segmentation and more about what different segments have in common; (3) Understand that market creation is not synonymous with either technological innovation or creative destruction; and (4) Stop focusing on premium versus low-cost strategies. The Harvard Business Review Classics series offers you the opportunity to make seminal Harvard Business Review articles a part of your permanent management library. Each highly readable volume contains a groundbreaking idea that continues to shape best practices and inspire countless managers around the world--and will have a direct impact on you today and for years to come.

Inhaltsangabe:Abstract: Using the new theory Blue Ocean Strategy of strategic behaviour the author is designing a consulting approach for management consulting business of small and medium-sized enterprises (SME) in Germany. The Blue Ocean Strategy challenges companies to break out of their current market by finding new unknown market space. The purpose of the dissertation is to describe the current competitor s markets as the status quo the participants perceive in their usual strategic approach, to identify then the key success factors and methods of the new theory Creating of Blue Oceans as the alternative and mold the main issues of this approach into a consulting product. The objectives are: 1. Identification of issues which could be described as key success factors for this new theory. 2. The strengths and weaknesses of the Blue Ocean Strategy approach. 3. Identifying SMEs as a target customer group and the value of the Blue Ocean approach for these target customers. 4. A consulting approach for management consulting of SMEs. The developed consulting concept could be offered to customers within their range of consulting services or be used as an internal measurement in consulting companies to find new areas for business development. In order to meet the aims of this dissertation the following structure is chosen: Chapter 1: The chapter 1 introduces the aims and objectives of this dissertation, its motivation, limitations and structure. Chapter 2: In chapter 2 the general business strategies for competing on defined market and the sorts of innovations are explained. Chapter 3: In chapter 3 the terms of red oceans and blue oceans are defined and later explained how they relate to the used business strategies on the markets. Chapter 4: In chapter 4 the theory of Blue Oceans Strategy will be presented on an abstract level to familiarize the reader with the key factors and main issues of this approach. Chapter 5: In chapter 5 the common definition of small and medium-sized enterprises will be presented in a first step to follow up with the illustration of the current situation for the SMEs in Germany, referring to the results of interviews with market participants or observers and studies of literature. Chapter 6: In chapter 6 the consulting concept based on value innovation will be designed. To understand in which way the approach differs from other consulting services, there will be a short introduction into [...]

In Blue Ocean Strategy, W. Chan Kim and Renee Mauborgne tackle the central problem facing all businesses: how to perform better than your competitors? Their solution involves taking a creative approach to the normal view of competition. In the normal framework, competition is a zero-sum game: if there are two companies competing for the same market, as one does better, the other has to do worse. The authors' creative leap is to suggest one can beat the competition by not competing. Companies should avoid confronting competitors in crowded marketplaces, what they call "red oceans," and instead seek out new markets, or "blue oceans." Once the blue oceans have been identified, companies can get down to the task of creating unique products which exploit that market. Chan and Mauborgne argue, for example, that a wine company might decide to start appealing to a group previously uninterested in wine. This would be a "blue ocean" market, giving the winemaker a huge advantage, which they could exploit by creating a wine that appealed to the tastes of a beer-drinking demographic. A classic of business writing, Blue Ocean Strategy is creative thinking and problem solving at its best.

If IT companies seek to differentiate themselves from the competition, they must turn to consultative selling. Consultative selling is analyzing the needs and challenges of your customers and selling unique services that enable your customers to reduce costs, increase profits, and improve overall business performance. The Art of Consultative Selling in IT provides a practical framework for becoming a successful consultative seller and shows how to use the blue ocean strategy to identify opportunities in areas where there is no competition. The first section discusses the advantages of consultative selling and explores the concepts of blue oceans. In blue oceans, demand is created rather than fought over. Competition is irrelevant because the rules of the game are waiting to be established. The author explains how you can use consultative selling techniques to create your own blue oceans of unknown market space, where opportunities for growth are both rapid and profitable. In the second section, the author defines the consultative selling framework (CSF). This framework is based on proven processes, best practices, and real-time case studies to make consultative selling a reality. It provides clear guidelines for understanding your customer's current landscape and challenges, owning its priorities, and helping it to achieve its short-term and long-term goals. The author explains how to use CSF to generate innovative ideas and present them to your customer through profit improvement or efficiency improvement proposals. The book concludes with examples of several innovative business improvement ideas that you can present to your customers, including Agile project management, master data management (MDM), application portfolio rationalization, and business process management (BPM). The author discusses the benefits of each methodology and lists the trigger points to think about when deciding whether the methodology can add value to a particular customer.

This book cuts through the strategy verbiage to get to the fundamentals of business strategy—its meaning, formulation, and implementation. Challenges to understanding strategy are examined, including institutions and national culture. Strategy theories are not just explained but assessed in terms of their validity, limitations, and applicability across countries, cultures, and organisations. The thinking and works of major strategists like Ohmae, Mintzberg, Porter, Rumelt, Barney, Prahalad, Hamel, Peng, Kim, and Mauborgne are reviewed in the context of strategic thinking, strategy formulation, and strategy implementation. The confusion and consensus in strategy are highlighted. While not prescriptive in terms of telling the corporate leader how to formulate strategy, for there is no one best strategy or one best way to formulate strategy, the book does identify broad approaches to corporate strategy formulation and implementation and the underlying principles. To this extent, corporate leaders and students and instructors of business and management will find the book informative and instructive.
