such as Metropolis and the C40 Cities Climate Leadership Group, Sofie Bouteligier's innovative study examines theories of the network society and global cities from a global ecology perspective. Through direct observation and interviews and using two types of city networks that have Page 46/76

been treated separately in the nance literature, she discovers the structure and logic pertaining to office networks of environmental nongovernmental organizations and environmental consultancy firms. In doing so she incisively demonstrates the ways in which cities fulfill the role Page 47/76

of strategic sites of global/ernance environmental governance, concentrating knowledge, infrastructure, and institutions vital to the function of transnational actors.

Cities have led the way to combat climate change by planning and Page 48/76

implementing climate mitigation and adaptation policies. These local efforts go beyond national boundaries. Cities are forming transnational networks to enhance their understandings and practices for climate policies. In contrast to national governments that have numerous obstacles to cope with Page 49/76

global climate change in the mance international and national level, cities have become significant international actors in the field of international relations and environmental governance. Global Cities and Climate Change examines the translocal relations of cities that have made an Page 50/76

international effort to collectively ce tackle climate change. Compared to state-centric terms, international or trans-national relations, trans-local relations look at policies, politics, and interactions of local governments in the globalized world. Using multimethods such as multi-level analysis, Page 51/76

comparative case studies, regression analysis and network analysis, Taedong Lee illustrates why some cities participated in transnational climate networks for cities; under what conditions cities internationally cooperate with other cities, with which cities; and which factors Page 52/76

influence climate policy performance. An essential read to all those who wish to understand the driving factors for local governments ' engagement in global climate governance from a theoretical as well as practical point of view. Lee makes a valuable contribution to the fields of Page 53/76

international relations, environmental policies, and urban studies.

An overview of the forms of agency in urban climate politics, including their strengths, limitations and the power dynamics between them. Written by renowned scholars from around the Page 54/76

globe, it is ideal for researchers and e practitioners working in the area of urban climate politics and governance.

It argues that the formation and implementation of local climate change policy has been limited by the Page 55/76

resources and powers of localnance government, and by conflicts between economic and environmental objectives.

Drawing upon a variety of empirical and theoretical perspectives, The Urban Climate Challenge provides a Page 56/76

hands-on perspective about the political and technical challenges now facing cities and transnational urban networks in the global climate regime. Bringing together experts working in the fields of global environmental governance, urban sustainability and climate change, this volume explores Page 57/76

the ways in which cities, transnational urban networks and global policy institutions are repositioning themselves in relation to this changing global policy environment. Focusing on both Northern and Southern experience across the globe, three questions that have strong Page 58/76

bearing on the ways in which we nee understand and assess the changing relationship between cities and global climate system are examined. How are cities repositioning themselves in relation to the global climate regime? How are cities being repositioned conceptually and epistemologically? Page 59/76

What are the prospects for crafting e policies that can reduce the urban carbon footprint while at the same time building resilience to future climate change? The Urban Climate Challenge will be of interest to scholars of urban climate policy, global environmental governance and Page 60/76

climate change. It will be of interest to readers more generally interested in the ways in which cities are now addressing the inter-related challenges of sustainable urban growth and global climate change. Chapter 9 and Chapter 11 of this book is freely available as a Page 61/76

downloadable Open Access PDF at Ce www.tandfebooks.com/openaccess. It has been made available under a Creative Commons Attribution-Non Commercial-No Derivatives 3.0 license.

Cities are playing an ever more Page 62/76

important role in the mitigation and e adaption to climate change. This book examines the politics shaping whether, how and to what extent cities engage in global climate governance. By studying the C40 Cities Climate Leadership Group, and drawing on scholarship from Page 63/76

international relations, social nance movements, global governance and field theory, the book introduces a theory of global urban governance fields. This theory links observed increases in city engagement and coordination to the convergence of C40 cities around particular ways of Page 64/76

understanding and enforcing climate governance. The collective capacity of cities to produce effective and socially equitable global climate governance is also analysed. Highlighting the constraints facing city networks and the potential pitfalls associated with a city-driven global response, this

assessment of the transformative ce potential of cities will be of great interest to researchers, graduate students and policymakers in global environmental politics and policy.

This volume provides a comprehensive overview of the Page 66/76

interactions and feedbacks between urbanization and global environmental change. A key focus is the examination of how urbanization influences global environmental change, and how global environmental change in turn influences urbanization processes. It Page 67/76

has four thematic foci: Theme 1ance addresses the pathways through which urbanization drives global environmental change. Theme 2 addresses the pathways through which global environmental change affects the urban system. Theme 3 addresses the interactions and Page 68/76

responses within the urban system in response to global environmental change. Theme 4 centers on critical emerging research.

Cities are no longer just places to live in. They are significant actors on the global stage, and nowhere is this Page 69/76

trend more prominent than in the ce world of transnational climate change governance (TCCG). Through transnational networks that form links between cities, states, international organizations, corporations, and civil society, cities are developing and implementing norms, practices, and Page 70/76

voluntary standards across national boundaries. In introducing cities as transnational lawmakers, Jolene Lin provides an exciting new perspective on climate change law and policy, offering novel insights about the reconfiguration of the state and the nature of international lawmaking as Page 71/76

the involvement of cities in TCCG ce blurs the public/private divide and the traditional strictures of 'domestic' versus 'international'. This illuminating book should be read by anyone interested in understanding how cities - in many cases, more than the countries in which they're located Page 72/76

Fare addressing the causes and ance consequences of climate change.

As population growth accelerates, researchers and professionals face challenges as they attempt to plan for the future. Urban planning is a significant component in addressing

the key concerns as the world ance population moves towards the city and leaves the rural environment behind, yet there are many factors to consider for a well rounded community. The Handbook of Research on Social, Economic, and Environmental Sustainability in the Page 74/76

Development of Smart Cities brings together the necessary research and interdisciplinary discussion to address dilemmas created by population growth and the expansion of urban environments. This publication is an essential reference source for researchers, academicians, investors, Page 75/76

and practitioners interested in the ce urban planning and technological advancements necessary for the creation of smart cities.
