EGGER OSB boards are multilayer boards with a three-layer structure of micro-veneers, so called strands, which are approved for load-bearing construction. The special strand geometry and strand orientation in the surface layers, as well as the low-emission glueing, ensure the best technical properties. All OSB boards comply with European standards.

by EGGER UK EGGER OSB panels are produced on state of the art continuous production lines where we optimise the strand orientation and moisture levels. It means we supply panels that are not only stronger but which reduce possible movement due to atmospheric conditions. Panels are available in 9-18mm thicknesses.

Mobile Saints examines the central medieval (ca. 950 – 1150 CE) practice of removing saints' relics from rural monasteries in order to take them on out-and-back journeys, particularly within northern France and the Low Countries. Though the permanent displacements of relics—translations—have long been understood as politically and culturally significant activities, these temporary circulations have received relatively little attention. Yet the act of taking a medieval relic from its “home,” even for a short time, had the power to transform the object, the people it encountered, and the landscape it traveled through. Using hagiographical and liturgical texts, this study reveals both the opportunities and tensions associated with these movements: circulating relics extended the power of the saint into the wider world, but could also provoke public displays of competition, mockery, and resistance. By contextualizing these effects within the discourses and practices that surrounded traveling relics, Mobile Saints emphasizes the complexities of the central medieval cult of relics and its participants, while speaking to broader questions about the role of movement in negotiating the relationships between sacred objects, space, and people.

The history of monastic institutions in the Middle Ages may at first appear remarkably uniform and predictable. Medieval commentators and modern scholars have observed how monasteries of the tenth to early twelfth centuries experienced long periods of stasis alternating with bursts of rapid development known

as reforms. Charismatic leaders by sheer force of will, and by assiduously recruiting the support of the ecclesiastical and lay elites, pushed monasticism forward toward reform, remediating the inevitable decline of discipline and government in these institutions. A lack of concrete information on what happened at individual monasteries is not regarded as a significant problem, as long as there is the possibility to reconstruct the reformers' ' ' program. ' ' While this general picture makes for a compelling narrative, it doesn't necessarily hold up when one looks closely at the history of specific institutions. In *Monastic Reform as Process*, Steven Vanderputten puts the history of monastic reform to the test by examining the evidence from seven monasteries in Flanders, one of the wealthiest principalities of northwestern Europe, between 900 and 1100. He finds that the reform of a monastery should be studied not as an "exogenous shock" but as an intentional blending of reformist ideals with existing structures and traditions. He also shows that reformist government was cumulative in nature, and many of the individual achievements and initiatives of reformist abbots were only possible because they built upon previous achievements. Rather than looking at reforms as "flashpoint events," we need to view them as processes worthy of study in their own right. Deeply researched and carefully argued, *Monastic Reform as Process* will be essential reading for scholars working on the history of monasteries more broadly as well as those studying the phenomenon of reform throughout history.
