This book chronicles the divergent growth trends in car production in Belgium and Spain. It delves into how European integration, high wages, and the demise of GM and Ford led to plant closings in Belgium. Next, it investigates how lower wages and the expansion strategies of Western European automakers stimulated expansion in the Spanish auto industry. Finally, it offers three alternate scenarios regarding how further EU expansion and Brexit may potentially reshape the geographic footprint of European car production over the next ten years. In sum, this book utilizes history to

help expand the knowledge of scholars and policymakers regarding how European integration and Brexit may impact future auto industry investment for all EU nations.

The modern workplace is often thought of as cold and rational, as no place for the experience and expression of emotions. Yet it is no more emotionless than any other aspect of life. Individuals bring their affective states and emotional "buttons" to work, leaders try to engender feelings of passion

and enthusiasm for the organization and its mission, and consultants seek to increase job satisfaction, commitment, and trust. This book advances the understanding of the causes and effects of emotions at work and extends existing theories to consider implications for the management of emotions. The international cast of authors examines the practical issues raised when organizations are studied as places where emotions are aroused, suppressed, used, and avoided. This book also joins the debate on how organizations and individuals ought to manage emotions in the workplace. Managing Emotions

in the Workplace is designed for use in graduate level courses in Organizational Behavior, Human Resource Management, or Organizational Development - any course in which the role of emotions in the workplace is a central concern. Scholars and consultants will also find this book to be an essential resource on the latest theory and practice in this emerging field.

The powertrain is at the heart of vehicle design; the engine - whether it is a conventional, hybrid or electric design - provides the motive power, which is then

managed and controlled through the transmission and final drive components. The overall powertrain system therefore defines the dynamic performance and character of the vehicle. The design of the powertrain has conventionally been tackled by analyzing each of the subsystems individually and the individual components, for example, engine, transmission and driveline have received considerable attention in textbooks over the past decades. The key theme of this book is to take a systems approach - to look at the integration of the components so that the whole powertrain system meets the demands of

overall energy efficiency and good drivability. Vehicle Powertrain Systems provides a thorough description and analysis of all the powertrain components and then treats them together so that the overall performance of the vehicle can be understood and calculated. The text is well supported by practical problems and worked examples. Extensive use is made of the MATLAB(R) software and many example programmes for vehicle calculations are provided in the text. Chapters discuss the costs involved in Formula racing and how they are borne by teams, promoters and racers. The book also looks at how society, the public and the private sectors stand to benefit economically from the motorsport industry. Other issues like the economics of TV rights, sponsorship and sustainability are also addressed, again for the first time in an

Moving beyond the economics of what happens off the track, the book also undertakes a serious examination of what goes in to making a winning team and what having a winning racer can do for a team's fortunes. Mourão's highly relevant and contemporary book also looks at how motorsport teams confront the challenges of the modern sporting world, including the changing dynamics of sports media and considers the future of Formula 1 as motorsports evolve.
