First published in 2011, Water Law in India is the only book to offer a comprehensive survey of the legal instruments concerning water in

India. It presents a variety of national and state-level instruments that make up the complex and diverse field of water law and policy. This book fills a critical gap in the study of water law, providing a rich reference point for the entire gamut of legal mechanisms available in India. This edition has been extensively revised to include new instruments on water regulation, such as the draft National Water Framework Bill, 2016, and the Model Groundwater (Sustainable Management) Act, 2016; new water-related instruments in such varied fields as criminal law, land acquisition law, and rural employment legislation; and a chapter on international legal instruments. Chapters on drinking water supply, environmental dimensions of water conservation, water infrastructure for irrigation and flood control, groundwater regulation, and institutions catering to water have been thoroughly updated for a complete coverage of water law.

In the face of growing freshwater scarcity, most countries of the world are taking steps to conserve their water and foster its sustainable use. Water crises range from concerns of drinking water availability and/or quality, the degradation or contamination of freshwater, and the allocation of water to different users. To meet the challenge, many countries are undergoing systemic changes to the use of freshwater and the provision of water services, thereby leading to greater commercialization of the resource as well as a restructuring of the legal, regulatory, technical and institutional frameworks for water. The contributions to this book critically analyse legal issues arising under international law, such as environment and human rights provisions, concerning the economic, environmental and social consequences of proposed water regulatory changes and their implementation at the national level. The book examines the situation in India which is currently in the midst of implementing several World Bank led water restructuring projects which will have significant impacts on the realisation of the right to water and all other aspects of water regulation for decades to come. In analysing the situation in India the volume is able to detail the interactions between international law and national law in the field of water, and to ask broader questions about the compliance with international law at the national level and the relevance of international law in national law and policy-making.

Effective water governance capacity is the foundation of efficient management of water resources. Water governance reform processes must work towards building capacity in a cohesive and articulated approach that links national policies, laws and institutions, within an enabling environment that allows for their implementation. This guide shows how national water reform processes can deliver good water governance, by focussing on the principles and practice of reform. RULE guides managers and decision makers on a journey which provides an overview of what makes good law, policy and institutions, and the steps needed to build a coherent and fully operational water governance structure.

This is the very first book to distill the principles of complex adaptive systems and adaptive management into practical guidance for policymakers. It describes the concept of adaptive policymaking and presents seven tools for developing such policies. Based on hundreds of interviews with people impacted by policy and research of over a dozen policy case studies, this book serves as a pragmatic guide for policymakers by elaborating on these seven tools. It is an invaluable information resource for technical policymakers and politicians, as well as for those studying politics and international relations.

"Water Governance in Motion: Towards Socially and Environmentally Sustainable Water Laws" focuses on the work undertaken by International Environmental Law Research Centre IELRC on water law reforms in India. It seeks to provide a broader understanding of the conceptual framework informing existing water law and ongoing reforms. The book is divided into two parts. The first part critically analyses the context of international law for water reforms and the second part discusses the multifaceted aspects of water sector reforms in India. It assembles in one volume the contributions made by a broad range of scholars working on various law and policy issues arising in the context of water sector reforms in India. The contributions have been specifically selected in order to address the wide range of issues including water distribution to households, irrigation, industrial use and wastewater treatment. These questions are dealt with from a range of perspectives including human rights, environment, agriculture, development and trade. The book would be of interest to academia, researchers, NGOs and policy-makers.

This book analyses the contribution of the IMO International Convention for the Safe and Environmentally Sound Recycling of Ships to sustainable ship recycling against the backdrop of present practices and third world approaches to sustainable development.

This book explores the changing nature of international law and its ability to respond to the contemporary issues related to international environment, trade and information technology. The evolution of international law has reached a stage where we are witnessing diminishing power of the state and its capacity to deal with the economic matters challenging the existing notions of territory and sovereignty. Recent trends in international law and international relations show that states no longer have exclusive control over the decision-making process at the global level. Keeping this in mind, the book brings together the perspectives of various international and national scholars. The book considers diverse issues such as, sustainable development, climate change, global warming, Rio+20, technology transfer, agro-biodiversity and genetic resource, authority for protection of environment, human right to water, globalization, human rights, sui generis options in IP laws, impact of liberalization on higher education, regulation of international trade, intellectual property rights, collective administration of copyright, broadcast reproduction rights, implementation of copyright law, communication rights under copyright law, arbitration for IP disputes, doctrine of exhaustion of rights, trans-border reputation of trademark, information as an asset, cyber obscenity and pornography, e-governance, taxation of e-commerce, computer crime, information technology, domain names, research excellence in legal education, ideological perspective on legal education, challenges for law teachers, and clinical legal education. The topics, though diverse, are closely interrelated, with the common concern throughout being that the global environment, international trade, information technology and legal education need appropriate national normative and institutional responses as well as the global cooperation of members of the international community. Presenting reflections of a number of Asian, African and European scholars on these varied facets, the book is of great value to scholars, practitioners, teachers and students associated with contemporary international law.

This monograph comprehensively examines water law regulations and reform in the present decade, going beyond a simple analysis of existing water law and regulations to encompass environmental, social, economic, and human rights aspects of water as a natural resource. Using the specific case of India and on the related international law and policy framework that directly influences water regulatory developments in India, this book offers what will be the first and only analysis of water law reforms taking place at the national level in many

developing countries in their domestic and international context. On the one hand, international freshwater law remains under-developed and existing legal instruments such as the 1997 UN Convention only address a limited set of relevant issues. Yet, the international law and policy framework concerning freshwater is increasingly important in shaping up law reforms taking place at the national level, in particular in developing countries. Indeed, non-binding resolutions such as the Dublin Statement on Water and Sustainable Development (1992) have had an immense influence on water law reforms in most developing countries. This book seeks to conceive of and analyse freshwater regulation in a broader context, and go beyond a literature that either lauds or criticises ongoing water sector reforms to provide an analytical basis for the reforms which all countries will have to adopt in the near or medium-term future.

Laws relating to water in India have diverse origins, including ancient local customs and the British Common Law. The in-depth chapters in this compendium, written by luminaries from various fields, pertain to issues on water and proceed to a discussion of the legal questions that arise. This volume thus straddles two domains, viz., (i) water-resource policy, management, conservation, conflict-resolution, etc., and (ii) water law. The book also briefly raises and explores the case for a constitutional declaration on water and an overarching national water law. The book is an invaluable resource for policy-makers, planners and administrators concerned with water at the Central, State and local levels; students, academics and practitioners in the domains of water as well as law; and social scientists, NGOs and activists concerned with the various issues discussed in the book. It should be useful as a main or supplementary textbook in universities and research or management institutions where any aspect of water (engineering, ecological, legal, social, economic, management or other) is a subject of study.
