~~Internal vs. External Rotation (EXPLAINED!) | YouTube~~

Rotation of body parts is referred to as internal or external, referring to rotation towards or away from the center of the body. Internal rotation (or medial rotation) is rotation towards the axis of the body. External rotation (or lateral rotation) is rotation away from the center of the body.

~~Anatomical terms of motion | Wikipedia~~

Overview: Internal and external rotation of the knee is a popular test especially in ski-ing populations. The popliteus and hamstrings muscles play a significant role in rotating the knee (internally and externally) to aid unlocking and locking the knee.

~~Internal/External Rotation | Isokinetics Explained~~

The internal rotation exercise is very similar to the external rotation, except that it develops the internal rotator muscles instead of the external ones. Start out the same as with the external rotation exercise. This time, however, hold the resistance band with the arm that is closest to the base with your fist to the side.

~~How to Protect Your Shoulders with Internal and External ...~~

This exercise is internal rotation. After you complete your reps, do external rotation with your left rotator cuff: Without changing position, hold the horseshoe handle in your left hand, so your forearm is across your waist. Keeping your left elbow against your side, pull the handle outward to lift the weight.

CHL = external rotation in neutral ; MGHL = external rotation in mid-elevation; AIGHL = external rotation in abduction; Inferior capsule (ICS) = abduction in neutral rotation; PIC = internal rotation; PSC = internal rotation in abduction

~~Frozen Shoulder | ShoulderDoc~~

The general process of turning involves rotating a part while a single-point cutting tool is moved parallel to the axis of rotation. Turning can be done on the external surface of the part as well as the internal surface (the process known as boring).The starting material is generally a workpiece generated by other processes such as casting, forging, extrusion, or drawing.

~~Turning | Wikipedia~~

Also known in anatomy as medial rotation, internal rotation is the rotation of a limb in a joint about a vertical axis toward the anterior or front of the body. A movement that is possible at the shoulder and hip joints, an example of internal rotation would be rotating an arm that is hanging by one's side in the shoulder joint so that the palm faces backward, or rotating the leg in the hip ...

~~What Is an Internal Rotation? (with pictures)~~

Now that I'm done with my tangent, I'm gonna demonstrate two poses for you that explore doing internal versus external rotation and not stick to just one. You can go into downward-facing dog. I would invite you to not just do external rotation (this may differ from what your favorite teachers are saying) You can also play with a little bit of internal rotation.
