A timeless classic of economic theory that remains fascinating and pertinent today, this is Frank Knight's famous explanation of why perfect competition cannot eliminate profits, the important differences between "risk" and "uncertainty," and the vital role of the entrepreneur in profitmaking. Based on Knight's PhD dissertation, this 1921 work, balancing theory with fact to come to stunning insights, is a distinct pleasure to read. FRANK H. KNIGHT (1885-1972) is considered by some the greatest American scholar of economics of the 20th century. An economics professor at the University of Chicago from 1927 until 1955, he was one of the founders of the Chicago school of economics, which influenced Milton Friedman and George Stigler.

Why economists' attempts to help poorer countries improve their economic well-being have failed. Since the end of World War II, economists have tried to figure out how poor countries in the tropics could attain standards of living approaching those of countries in Europe and North America. Attempted remedies have included providing foreign aid, investing in machines, fostering education, controlling population growth, and making aid loans as well as forgiving those loans on condition of reforms. None of these solutions has delivered as promised. The problem is not the failure of economics, William Easterly argues, but the failure to apply economic principles to practical policy work. In this book Easterly shows how these solutions all violate the basic principle of economics, that people—private individuals and businesses, government officials, even aid donors—respond to incentives. Easterly first discusses the importance of growth. He then analyzes the development solutions that have failed. Finally, he suggests alternative approaches to the problem. Written in an accessible, at times irreverent, style, Easterly's book combines modern growth theory with anecdotes from his fieldwork for the World Bank.

Exploitation and Economic Justice in the Liberal Capitalist State offers the first new, liberal theory of economic justice to appear in more than 30 years. Built on a non-Marxist theory of exploitation that itself is based on a re-conceived notion of the ancient doctrine of the just price and the author's own more recent concept of intolerable unfairness, the theory of economic justice the book presents is designed to offer an alternative to the mostpopular liberal egalitarian theories of the day, such as those offered by John Rawls and Ronald Dworkin, but one which is designed to be acceptable to both right and left libertarians too.

OFINANCE: The Ultimate Resource (4th edition) offers both practical and thought-provoking articles for the finance practitioner, written by leading experts from the markets and academia. This edition will also comprise key perspectives on environmental, social, and governance (ESG) factors -- essential for understanding the long-term sustainability of a company, whether you are an investor or a corporate strategist. Also included: Checklists: more than 250 practical guides and solutions to daily financial challenges; Finance Information Sources: 200+ pages spanning 65 finance areas; International Financial Information: up-to-date country and industry data; Management Library: over 130 summaries of the most popular finance titles; Finance Thinkers: 50 biographies covering their work and life; Quotations and Dictionary.

Offers an introduction to modern economics principles.

Known for its unified and logical structure, lively writing style, and clear explanations, this book provides access to the most current economic information available. Since the 6/e published, many things have affected our economy: the Presidential Election, the impact of the 9/11 tragedy, and the recession that we are all living through on a daily basis. The updated edition, written by two highly respected economists and educators, uses the "Stories, Graphs, and Equations" approach to make economic concepts accessible and relevant to a wide reading audience. A five-part organization covers an introduction to economics, concepts and problems in macroeconomics, goods and money markets, macroeconomic analysis, and the world economy. For individuals getting their first—and often challenging—look at the core concepts of economics.
