Criminal Procedure & Sentencing provides a comprehensive, engaging and up-to-date guide to each step of criminal procedure, from the arrest of the suspect through to trial, sentencing and appeals. Taking a strong practical focus throughout, it covers all aspects of the criminal justice system and sentencing and has been thoroughly revised and updated in the light of changes to the funding of legal aid and widespread changes to the legal system. The 8th edition focuses on a thorough explanation of the law and offers a clear and comprehensive account of amendments to the Criminal Procedure Rules and the implications of the Legal Aid, Sentencing and Punishment of Offenders Act 2012 as well as recent case law. The author also considers alternatives to prosecution as well as important developments in sentencing, including the creation of the Sentencing Council by the Coroners and Justice Act 2009 and recent key Court of Appeal decisions affecting sentencing procedure and sentencing principles. The author's authoritative yet engaging writing style brings the subject to life and helps to explain complex issues in an easy-to-understand way. With a helpful glossary as well as suggestions for further reading at

the end of each chapter, this is an ideal text for anyone with an interest in the criminal justice system. The supporting website offers readers access to regular updates to the law but also a comprehensive set of web links and advice on additional reading and research for those seeking to engage in critical evaluation of the criminal justice system.

Updated with new chapters, case examples, and a new focus on evidence-based practice. This proven approach helps students understand the “why” of each frame of reference before moving on to the “how” of creating effective treatment programs to help pediatric clients lead richer, fuller lives. The book first covers the foundations of frames reference for pediatric OT (Section I), and then covers commonly used frames of reference such as motor skill acquisition, biomechanical, and sensory integration (Section II). A final section discusses newer focused/specific frames of reference like handwriting skills and social participation. A standardized format within each frame of reference chapter covers the same elements (Theoretical Base, Supporting Evidence, the Function/Dysfunction Continuum, Guide to Evaluation, and Application to Practice) to help students build the knowledge and skills needed for effective practice.

Immunohistochemistry (IHC) is an ancillary method, widely used in pathologists' practice, that allows identifying diagnostic and prognostic/predictive of therapeutic response protein markers on tissue samples by the use of specific monoclonal antibodies and chromogenic substances that guarantee the visualization of an antibody–antigene binding complex under a light microscope [1]. Coon et al., in 1941 [2], first introduced the use of fluorochrome-conjugated antibodies in clinical practice. Since then, IHC has gone from

being a useful tool for identifying the differentiation line of otherwise undifferentiated cells to a technique capable of providing not only diagnostic but also prognostic and predictive indications of responses to specific therapeutic options [1,3]. The abovementioned peculiarities have made IHC one of the most used ancillary methods in the histopathological approach to human neoplastic and non-neoplastic diseases [3-5]. This Special Issue contains 11 accepted papers that provide readers with a comprehensive update on current and future applications of IHC in medical practice.
