The 2016 UNGASS on drug policy resulted in an Outcome Document detailing profound differences of opinion and practice between different states polarising public health and human rights themes. This book examines the different positions, the underlying problems, and the options open for the next international gathering on drugs.

This book examines the topical issue of global drug policy and outlines five steps that could be taken to improve its effectiveness. A public criminology approach is applied to explore not only what could be done, but also why it matters and how it could be achieved. It argues that more effective global drug policies require an acknowledgement of the failure of a war on drugs approach and the harms it has caused. Instead, strategies that reduce drug related harm should be prioritised. An innovative and diverse range of approaches should be developed that are underpinned by evaluation and dissemination of results. Finally, the horizons of the drug policy debate should be broadened. In line with the central aims of public criminology, this book provides an accessible contribution to global drug policy debates that links theory and practice and which will have appeal to a wide range of audiences.

A comprehensive look at the world of illicit trade In the past three decades, technology has changed the fundamentals of trade, in legitimate and illegal economies. The most advanced forms of illicit trade have broken with all historical precedents and operate as if on steroids, tied to computers and social media. Dark Commerce examines how new technology, communications, and globalization fuel the exponential growth of dangerous forms of illegal trade—the markets for narcotics and child pornography, the escalation of sex trafficking, and the sale of endangered species. The illicit economy exacerbates many of the world's destabilizing phenomena: the perpetuation of conflicts, the proliferation of arms and weapons of mass destruction, and environmental degradation and extinction. Dark Commerce demonstrates that the dark market is a business the global community cannot afford to ignore.

Now in a thoroughly revised, expanded, and updated edition, this classic text provides an authoritative and current analysis of contemporary Russia. Leading scholars explore the daunting domestic and international problems Russia confronts, considering a comprehensive array of economic, political, foreign policy, and social issues.

Taking a multidisciplinary perspective (including public health, sociology, criminology, and political science amongst others) and using examples from across the globe, this book provides a detailed understanding of the complex and highly contested nature of drug policy, drug policy making, and the theoretical perspectives that inform the study of drug policy. It draws on four different theoretical perspectives: evidence-informed policy, policy process theories, democratic theory, and post-structural policy analysis. The use and trade in illegal drugs is a global phenomenon. It is viewed by governments as a significant social, legal, and health problem that shows no signs of abating. The key questions explored throughout this book are what governments and other bodies of social regulation should do about illicit drugs, including drug policies aimed at improving health and reducing harm, drug laws and regulation, and the role of research and values in policy development. Seeing policy formation as dynamic iterative interactions between actors, ideas, institutions, and networks of policy advocates, the book explores how policy problems are constructed and policy solutions selected, and how these processes intersect with research evidence and values. This then animates the call to democratise drug policy and bring about inclusive meaningful participation in policy development in order to provide the opportunity for better, more effective, and value-aligned drug policies. This book will be of great interest to students and scholars of drug policy from a number of disciplines, including public health, sociology, criminology, and political science.

These Guidelines review the use of medicines such as methadone, buprenorphine, naltrexone and clonidine in combination with psychosocial support in the treatment of people dependent on heroin or other opioids. Based on systematic reviews of the literature and using the GRADE approach to determining evidence quality, the guidelines contain specific recommendations on the range of issues faced in organizing treatment systems, managing treatment programmes and in treating people dependent on opioids. Developed in collaboration with internationally acclaimed experts from the different regions of the globe, this book should be of interest to policy makers, program managers, and clinicians everywhere who seek to alleviate the burden of opioid dependence.

What challenges does today's Russia pose for the United States and the U.S. Air Force? If certain economic, military, social, and political negative trends in Russia continue, they may create a new set of dangers that might prove more real, and therefore more frightening, than the far-off specter of Russian attack ever was. In a number of scenarios, the U.S. Air Force is certain to be called upon for transportation and perhaps for various military missions in a very demanding environment.

The World Drug Report presents comprehensive information on the illicit drug situation. It provides detailed estimates and trends on production, trafficking and consumption in the opium/heroin, coca/cocaine, cannabis and amphetamine-type stimulants markets. The drug problem is being contained but there are warning signs that the stabilization which has occurred over the last few years could be in danger. Notable amongst these is the increase in both opium poppy and coca cultivation in 2007, some growth in consumption in developing countries and some development of new trafficking patterns. There have also been encouraging contractions in some of the main consumer markets. This year, almost one hundred years since the Shanghai Opium Commission in 1909, the Report presents an historical review of the development of the international drug control system.

Cuando los políticos con responsabilidades de gobierno hablan de narcotráfico, es común que propongan la prohibición total, la panacea de una sociedad libre de drogas ilegales. En este marco, recurren a discursos y promesas punitivas, que consistirían en más "mano dura" o directamente en la militarización de la cruzada antinarcóticos. Atento sobre todo a la situación de América Latina y la Argentina, y analizando evidencia confiable del plano internacional, Juan Gabriel Tokatlian dice de entrada que esa meta es no sólo inalcanzable sino peligrosa, que se asienta en un diagnóstico errado y en información sorprendentemente parcial, y que la política coercitiva que se sustenta en esas ideas ha fracasado en todas partes, dañando los derechos de los más vulnerables, dilapidando recursos públicos y, lo que es peor, demorando el debate sobre una estrategia alternativa. Entre la sobreactuación de los políticos por su pánico a perder dividendos electorales, y la indiferencia o la desmesura de la opinión pública, se agitan fantasmas sin verdadero asidero -la colombianización, la mexicanización-, mientras se insiste en las tácticas represivas que no conducen a nada. Tokatlian, un experto con amplísimo reconocimiento académico que ha seguido el tema durante décadas con una coherencia infrecuente, repasa la lógica del régimen prohibicionista y propone repensar todo, resignando el efectismo grandilocuente e ineficaz y apostando a reformas graduales y sostenibles. La contención, la formulación de regulaciones especiales según la sustancia de que se trate, no es sinónimo de derrota, sino signo de realismo. Sólo un Estado fortalecido, que saque el tema del ámbito penal para reubicarlo donde de verdad corresponde (la salud y la educación de los sectores vulnerables, el control del lavado de activos, la vigilancia de toda la cadena productiva -desde la demanda hasta la oferta-), estará en condiciones de acotar a su mínima expresión el crimen organizado.
