The NEC Term Service Contract, or TSC, is
part of the NEC3 and NEC4 suites of contracts
(see Practice Note: NEC
contracts—introduction). The NEC Term Service
Contract is designed to engage a contractor
for a set period of time, to manage and
provide a service—this might include
construction works, but can be used for the
provision of other services.

UNIQUE FEATURES - Designed to be used as a desk top manual - Describes the main features of the contracts in the NEC family - Includes guidance on which NEC contract is appropriate for a particular project and how to prepare it - Useful for those who need more information about the NEC and its philosophy - Includes exercises at the end of several chapters to stimulate discussions about the many factors that need to be considered in choosing the right NEC contract

BACKGROUND INFORMATION The last decades of the twentieth century saw huge changes in construction in the UK, particularly in procurement methods and contract strategy. In this book the author describes these changes as a construction reformation and suggests that the advent of the NEC played an important part in promoting those changes. Since its introduction to the construction sector in 1991, the NEC has been highly recommended in the Latham Report and more recently by the Office of Government Commerce and is now widely used on many small and large projects in the UK and worldwide.

ENSURING PROJECT OBJECTIVES In this guide, Bill Weddell, a long standing member of the NEC Panel and a highly respected consultant and trainer on

the NEC utilises his skills and wide knowledge of the NEC to provide new and existing users with guidance on how to select and implement NEC contracts to suit differing project needs and objectives. ACCURATE CONTRACT STRATEGIES This guide explains in a concise and practical manner how to decide on the appropriate contract strategy for any given project and how to prepare the contract document for each type of NEC contract. It describes each of the documents and explains the selection methods for the various options and how these are used to produce the contract document. The book also clarifies some of the distinguishing features of the NEC contracts in contrast to the more traditional standard forms and explains how the management procedures in each contract can be used to achieve the Employer's objectives by effective control of time, cost and quality. THE READERSHIP This guide is a valuable tool for anybody involved in the NEC supply chain including clients, consultants, contractors, subcontractors, project managers, quantity surveyors, adjudicators and service suppliers - across the complete spectrum of construction activity. ABOUT THE AUTHOR: Bill Weddell was on the original NEC Working Group and drafting team and has been involved in the later development of the NEC family of contracts up to the publication of NEC3. He has long experience of both design and construction of major civil engineering works including highways, bridges, docks and

management Provide information about Building Information Modeling (BIM), and ISO Certification in Construction Industry Offer a chapter on Lean construction The construction project life cycle phases and its activities/elements/subsystems are comprehensively developed and take into consideration Henri Fayol's Management Function concept which was subsequently modified by Koontz and O'Donnell and Management Processes Knowledge Areas described in PMBOK® published by Project Management Institute (PMI). The information available in the book will also prove valuable for academics/instructors to provide construction management/project management students with in-depth knowledge and guidelines followed in the construction projects and familiarize them with construction management practices.

Currently in its third edition, the NEC suite has become one of the UK's leading families of standard forms of contract for major construction and civil engineering projects. Part of the NEC suite, the Professional Services Contract (PSC) was drafted with the same process-based approach and objectives, offering a standard contract for the appointment of consultants providing professional services in an engineering or construction project.

Embodying best practice in terms of project management, the basic philosophy of the PSC differs from the principles and approach of other standard contracts used to appoint consultants. This book is a practical guide to the application of the PSC. Starting with a brief discussion of the background and philosophy behind the PSC, it identifies the roles and responsibilities of each of the named functions within the contract, explains the approaches required to achieve a successful working relationship between all parties, and examines all the procedures in the PSC. The book explains the links between the various sections of the contract to assist the reader with cross referencing, and covers all the variations created by the Main and Secondary Options. As a very practical guide it will aid users in the transition from their use and understanding of the other standard contracts to the collaborative project management-based approach of the PSC. Written for anyone working in the construction and related industries using the PSC to procure or provide consultancy services in relation to a construction project, it will be of interest to the complete construction supply chain, particularly architects, structural engineers, services (M&E) engineers, civil engineers, quantity surveyors and interior designers, together with Contractors and Sub-Contractors who have a design liability and employ consultants to assist them. It will also be

of interest to consultants and lawyers advising any of these parties, either in the preparation of contract documentation or the resolution of problem situations which may arise.

This book examines how the most commonly used construction project contracts are applied in a range of countries around the world. The specific situation of each of the almost 40 countries studied is dealt with in a dedicated chapter, allowing for easy comparison between differing legal and commercial environments. Each chapter contextualizes the relevant contracts within the legal and commercial systems prevalent in a particular country and examines a number of common issues impacting construction projects around the world. This unique book will be an essential resource for construction law specialists around the world because of its focus on commonly used contracts and the contextualizing of these contracts into the legal and commercial environment of each studied country. All contributions are from practicing construction project lawyers ensuring that the quality of the information and analysis is of the highest standard.

As use of the NEC (formerly the New Engineering Contract) family of contracts continues to grow worldwide, so does the importance of understanding its clauses and nuances to everyone working in the built

environment. Currently in its third edition, this set of contracts is different to others in concept as well as format, so users may well find themselves needing a helping hand along the way. Understanding NEC3: Professional Services Contract uses plain English to lead the reader through the NEC3 Professional Services Contract's key features, including: Main and Secondary Options the use of early warnings programme provisions payment compensation events preparing and assessing tenders. Common problems experienced when using the Professional Services Contract are signalled to the reader throughout, and the correct way of reading each clause is explained. The ways in which the contract affects procurement processes, dispute resolution, project management and risk management are all addressed in order to direct the user to best practice. Written for construction professionals, by a practising international construction contract consultant, this handbook is the most straightforward, balanced and practical guide to the NEC3 PSC available. It is an ideal companion for Employers, Consultants, Contractors, Engineers, Architects, Quantity Surveyors, Subcontractors and anyone else interested in working successfully with the NEC3 PSC.
