Apologies for the late update. Thanks to a wonderful junior, Alihyder Nazeer from the class of 2024, I am able to share updated AKU-EB past papers with answers. Not only was he kind enough to send this helpful resource over to me, but also confirmed the hunch I had back in 2017 when I applied that the closest we can get to the AKU MBBS entry test is AKU-EB papers.

Cambridge Low Price Editions are reprints of internationally respected books from Cambridge University Press. Advanced Chemistry covers the syllabuses of all the main examining boards offering A-level chemistry, and contains material suitable for students beginning undergraduate study. The author places the subject in context by discussing the nature and the wider implications and applications of chemistry. The material is divided into four parts: physical, industrial, inorganic and organic chemistry. Each part is divided into short self-contained units, each of which develops a set of well-defined themes or concepts. Students may work through the units in order, or individual units may be used separately.

A major new investigation into the Bhutto family, examining their influence in Pakistan from the colonial era to the present day "Fluently written, impeccably researched and never short of extraordinary insights, this is a landmark publication."--Farzana Shaikh, Literary Review The Bhutto family has long been one of the most ambitious and powerful in Pakistan. But politics has cost the Bhuttos dear. Zulfikar Ali Bhutto, widely regarded as the most talented politician in the country's history, was removed from power in 1977 and executed two years later, at the age of 51. Of his four children, three met unnatural deaths: Shahnawaz was poisoned in 1985 at the age of 27; Murtaza was shot by the police outside his home in 1996, aged 42; and Benazir Bhutto, who led the Pakistan Peoples Party and became Prime Minister twice, was killed by a suicide bomber in Rawalpindi in 2007, aged 54. Drawing on original research and unpublished documents gathered over twenty years, Owen Bennett-Jones explores the turbulent existence of this extraordinary family, including their volatile relationship with British colonialists, the Pakistani armed forces, and the United States.

This book considers the evolution of medical education over the centuries, presents various theories and principles of learning (pedagogical and andragogical) and discusses different forms of medical curriculum and the strategies employed to develop them, citing examples from medical schools in developed and developing nations. Instructional methodologies and tools for assessment and evaluation are discussed at length and additional elements of modern medical teaching, such as writing skills, communication skills, evidence-based medicine, medical ethics, skill labs and webinars, are fully considered. In discussing these topics, the authors draw upon the personal experience that they have gained in learning, teaching and disseminating knowledge in many parts of the world over the past four decades. Medical Education in Modern Times will be of interest for medical students, doctors, teachers, nurses, paramedics and health and education planners.

"The editors...have done an outstanding job of presenting...complex information in a lucid manner – this book is a must-read for the global community of aspiring students and neuro-oncology practitioners." Amar Gajjar, MD in the Foreword This is a succinct introduction to pediatric neuro-oncology. It summarizes the key advances in molecular biology that have helped transform this rapidly evolving field and provides up-to-date coverage of major and emerging treatment modalities as well as supportive care. Separate chapters present each kind of pediatric brain cancer and its diagnosis and treatment. As more children survive brain cancer, the importance of quality of life issues and helping survivors to cope with the neuropsychological impact and long-term effects of current therapies has come into sharper focus; these topics are also addressed in the book, as are palliative care and pediatric neuro-oncology in countries with limited resources. The book is aimed at trainees and practitioners who seek an up-to-date text in pediatric neuro-oncology that is both comprehensive and concise.

This new edition provides paediatricians with the latest developments in the diagnosis of diseases and disorders in children. Divided into five sections, the book begins with a colour atlas illustrating different signs and symptoms. The following chapters describe numerous common paediatric presentations with guidance on differential diagnosis. The book concludes with sections on differential diagnosis of select clinical signs, salient laboratory findings, and select radiologic signs. The sixth edition has been fully revised and features new topics including micrognathia, Potter's face syndrome, mediastinal shift, and more. Key points Guide to latest developments in differential diagnosis of paediatric diseases and disorders Fully revised, sixth edition featuring several new topics Includes comprehensive colour atlas illustrating different signs and symptoms Previous edition (9788184487275) published in 2008
