Alphabetical listing of diseases, medicinal substances, entries on pharmaceutical topics, pesticides, surgical dressings, and entries describing chromatographic and spectrophotometric techniques. "Intended to update the British Pharmaceutical Codex 1973 as a formulary and general reference book but does not supersede that volume in respect of any standards not taken into the British Pharmacopoeia."

The authors have been teaching Dispensing and Compounding practice for a very long period. One of the challenges in their career was the lack of a proper, user friendly and comprehensive reference in compounding to use for teaching and instructing students as well as in hospital pharmacy practice. This book was constructed with this challenge in mind, and therefore simply presents such a reference. It is simply written, covers a wide spectrum of compounding practice with many formulae. The book is also useful for entrepreneurial individuals interested in small scale manufacturing of extemporaneous products.

Pharmacists have been responsible for compounding medicines for centuries. Although most modern medicines are not compounded in a local pharmacy environment, there are still occasions when it is imperative that pharmacists have this knowledge. *Pharmaceutical Compounding and Dispensing* provides a comprehensive guide to producing extemporaneous formulations safely and effectively. The book covers three core sections: the history of compounding; pharmaceutical forms and their preparation; product formulae. This is a modern, detailed and practical guide to the theory and practice of extemporaneous compounding and dispensing. Fully revised and updated, this new edition will be an indispensable reference for pharmacy students and practicing pharmacists. Supplementary videos demonstrating various dispensing procedures can be viewed online.

With over 400 drug monographs, this book covers the technical, practical and legal aspects that you should consider before prescribing or administering drugs via enteral feeding tubes.

An internationally acclaimed reference work recognized as one of the most authoritative and comprehensive sources of information on excipients used in pharmaceutical formulation with this new edition providing 340 excipient monographs. Incorporates information on the uses, and chemical and physical properties of excipients systematically collated from a variety of international sources including: pharmacopeias, patents, primary and secondary literature, websites, and manufacturers' data; extensive data provided on the applications, licensing, and safety of excipients; comprehensively cross-referenced and indexed, with many additional excipients described as related substances and an international supplier's directory and detailed information on trade names and specific grades or types of excipients commercially available.

Published in 1998, these essays focus on Rome and the curia in the 11th and 12th centuries. Several relate to Cardinal Deusdedit and his canonical collection (1087) and to the pontificate of Paschal II (1099-1118). Both personalities and their ideas are presented within the larger setting of contemporary problems, highlighting divergent currents among ecclesiastical reformers at a time of the investiture controversies. A third common theme is formed by discussions of the organization and archival practices of the curia, which were of fundamental importance for the growth and codification of canon law, not to mention papal control of the Church.
