The first comprehensive survey of the religious, social and cultural life of late medieval and Reformation parishes covers town and country, northern as well as southern communities, and provides an indication of the European setting just before and just after the enormous social and religious changes of the 16th century. 15 illustrations.

This book centers on the fact that needed improvements in our schools will not occur unless education is able to attract and retain great teachers in the school's classrooms.

The idea of The Fingerprint Sourcebook originated during a meeting in April 2002. Individuals representing the fingerprint, academic, and scientific communities met in Chicago, Illinois, for a day and a half to discuss the state of fingerprint identification with a view toward the challenges raised by Daubert issues. The meeting was a joint project between the International Association for Identification (IAI) and West Virginia University (WVU). One recommendation that came out of that meeting was a suggestion to create a sourcebook for friction ridge examiners, that is, a single source of researched information regarding the subject. This sourcebook would provide educational, training, and research information for the international scientific community.

Prime minister of India Manmohan Singh has been accused of changing ministerial portfolios at the behest of the Reliance group. There have been claims that the group deliberately 'squatted' on reserves of natural gas and curtailed production in anticipation of higher prices that are administered by the government, to the detriment of the interests of the country's people. Spokespersons of the group deny these allegations and contend that gas output from the Krishna-Godavari basin came down on account of unforeseen adverse geological surprises. Sections within the Indian government do not buy these arguments. The Comptroller and Auditor General of India has alleged, among other things, that the contract between the government and Reliance Industries Limited is deeply flawed, thereby encouraging excessive capital expenditure and lowering potential benefits to the exchequer. With painstaking research, a meticulous perusal of press reports, as well as a few surprising exclusives, Gas Wars highlights cases of crony capitalism that allowed the Reliance group to blatantly exploit loopholes which were consciously retained in the system to benefit it. The book points out how, even when laws and policies appeared fair, rational, and reasonable, the way in which these rules and procedures were framed and implemented by bureaucrats acting at the behest of their political masters exposed the deep nexus between business and politics in India. Even as Gas Wars tells the story of how a corporate conglomerate, in this case the country's largest, has benefited from the way government policies are structured, it lays bare the alarming facts of a natural disaster waiting to happen due to the ruthless exploitation of the country's natural resources in order to swell the fortunes of a few. The book also highlights the examples of those within the government establishment who have refused to be intimidated by the rich and the powerful, and who have against all odds valiantly attempted to uphold the interests of the people of India.

The recognition is growing: truly addressing the problems of the 21st century requires going beyond small tweaks and modest reforms to business as usual—it requires "changing the system." But what does this mean? And what would it entail? The New Systems Reader highlights some of the most thoughtful, substantive, and promising answers to these questions, drawing on the work and ideas of some of the world's key thinkers and activists on systemic change. Amid the failure of traditional politics and policies to address our fundamental challenges, an increasing number of thoughtful proposals and real-world models suggest new possibilities, this book convenes an essential conversation about the future we want.

Offers an outline of all the major subject areas covered on the American Registry of Radiologic Technology exam in radiography. This book contains revision questions and answers and an employment preparation section.

A savage indictment of religious extremism and man's inhumanity to man. Lajja was banned in Bangladesh, but became a bestseller in the rest of the world. The Duttas—Sudhamoy and Kironmoyee, and their children, Suranjan and Maya—have lived in Bangladesh all their lives. Despite being members of a small, vulnerable Hindu community, they refuse to leave their country, unlike most of their friends and relatives. Sudhamoy believes with a naive mix of optimism and idealism that his motherland will not let him down. And then, on 6 December 1992, the Babri Masjid is demolished. The world condemns the incident, but its immediate fallout is felt most acutely in Bangladesh, where Muslim mobs begin to seek out and attack Hindus. The nightmare inevitably arrives at the Duttas' doorstep, and their world begins to fall apart.

Based largely on new material, this book examines thuggee as a type of banditry, emerging in a specific socio-economic and geographic context. The British usually described the thugs as fanatic assassins and Kali-worshippers, yet Wagner argues that the history of thuggee need no longer be limited to the study of its representation.

The World Health Organization stated that approximately two-thirds of the world's population lacks adequate access to medical imaging. The scarcity of imaging services in developing regions contributes to a widening disparity of health care and limits global public health programs that require imaging. Radiology is an important component of many global health programs, including those that address tuberculosis, AIDS-related disease, trauma, occupational and environmental exposures, breast cancer screening, and maternal-infant health care. There is a growing need for medical imaging in global health efforts and humanitarian outreach, particularly as an increasing number of academic, government, and non-governmental organizations expand delivery of health care to disadvantaged people worldwide. To systematically deploy clinical imaging services to low-resource settings requires contributions from a variety of disciplines such as clinical radiology, epidemiology, public health, finance, radiation physics, information technology, engineering, and others. This book will review critical concepts for those interested in managing, establishing, or participating in a medical imaging program for resource-limited environments and diverse cross-cultural contexts undergoing imaging technology adaptation.
