William Labov is an American linguist, widely regarded as the founder of the discipline of variationist sociolinguistics. He has been described as "an enormously original and influential figure who has created much of the methodology" of sociolinguistics. He is a professor emeritus in the linguistics department of the University of Pennsylvania, and pursues research in sociolinguistics, language change, and dialectology. He retired in 2015 but continues to publish research.

William Labov - Wikipedia

American Sociolinguist William Labov, whose interests include variational sociolinguistics and dialectology. What was he researching? Labov was interested in phonological variation. He investigated the /au/ and /ai/ vowel sounds, in words such as mouse and mice, which in linguistic terms is called a diphthong.

William Labov – Martha ' s Vineyard – All About Linguistics

Urban dialectology constitutes the core area of sociolinguistics and is also referred to as variationist sociolinguistics or simply as the variationist approach. The American linguist William Labov is a central figure within this approach and with his work on linguistic variation in New York City he has provided us with new insights into the occurrence of linguistic variation.

Reviewed Work(s): Sociolinguistic Patterns by William Labov

In addition to exploring synchronic patterns of sociolinguistic variation, Labov has devoted enormous attention to questions of language change. Most of his research examines English, and he has been influential in the field of American dialectology, where he has helped to turn scholarly attention away from its traditional focus on the retention of regional speech patterns.

Sociolinguistic Patterns by William Labov

Sociolinguistic Patterns William Labov

William Labov, is an American linguist, widely regarded as the founder of the discipline of variationist sociolinguistics. His research issues include: sociolinguistics, language change, and dialectology. What was he researching? He looked at the pronunciation of /r/ in the middle, and at the end of words, for example car and heart.

This classic volume, by a well-known linguist, constitutes a systematic introduction to sociolinguistics, unmatched in the clarity and forcefulness of its approach, and to the study of language in its social setting.

Written by the world-renowned pioneer in the field of modern sociolinguistics, this volume examines the cognitive and cultural factors responsible for linguistic change, tracing the life history of these developments, from triggering events to driving forces and endpoints. Explores the major insights obtained by combining sociolinguistics with the results of dialect geography on a large scale Examines the cognitive and cultural influences responsible for linguistic change Demonstrates under what conditions dialects diverge from one another Establishes an essential distinction between transmission within the community and diffusion across communities Completes Labov's seminal Principles of Linguistic Change trilogy

This volume presents the long-anticipated results of several decades of inquiry into the social origins and social motivation of linguistic change. Written by one of the founders of modern sociolinguistics Features the first complete report on the Philadelphia project designed to establish the social location of the leaders of linguistic change Includes chapters on social class, neighborhood, ethnicity, gender, and social networks that delineate the leaders of linguistic change as women of the upper working class with a high density of interaction within their neighborhoods and a high proportion of weak ties outside of it

With the recent controversy in the Oakland, California school district about Ebonics—or as it is referred to in sociolinguistic circles, African American Vernacular English or Black English Vernacular—much attention has been paid to the patterns of speech prevalent among African Americans in the inner city. In January 1997, at the height of the Ebonics debate, author and prominent sociolinguist William Labov testified before a Senate subcommittee that for most inner city African American children, the relation of sound to spelling is different, and more complicated than for speakers of other dialects. He suggested that it was time to apply this knowledge to the teaching of reading. The testimony harkened back to research contained in his groundbreaking book *Language in the Inner City*, originally published in 1972. In it, Labov probed the question "Does 'Black English' exist?" and emerged with an answer that was well ahead of his time, and that remains essential to our contemporary understanding of the subject. *Language in the Inner City* firmly establishes African American Vernacular English not simply as slang but as a well-formed set of rules of pronunciation and grammar capable of conveying complex logic and reasoning. Studying not only the normal processes of communication in the inner city but such art forms as the ritual insult and ritualized narrative, Labov confirms the Black vernacular as a separate and independent dialect of English. His analysis goes on to clarify the nature and processes of linguistic change in the context of a changing society. Perhaps even more today than two decades ago, Labov's conclusions are mandatory reading for anyone concerned with education and social change, with African American culture, and with the future of race relations in this country.

This is a two-volume collection of original research papers designed to reflect the breadth and depth of the impact that William Labov has had on linguistic science. Four areas of 'Labovian' linguistics are addressed: First is the study of variation and change; the papers in sections I and II of the first volume take this as their central theme, with a focus on either the social context and uses of language (I) or on the the internal linguistic dynamics of variation and change (II). The study of African American English, and other language varieties in the Americas spoken by people of African descent and influenced by their linguistic heritage, is the subject of the papers in section III of the first volume. The third theme is the study of discourse; the papers in section I of the second volume develop themes in Labovian linguistics that go back to Labov's work on narrative, descriptive, and therapeutic discourse. Fourth is the emphasis on language use, the search for

discursive, interactive, and meaningful determinants of the complexity in human communication. Papers with these themes appear in section II of the second volume.

The Atlas of North American English provides the first overall view of the pronunciation and vowel systems of the dialects of the U.S. and Canada. The Atlas re-defines the regional dialects of American English on the basis of sound changes active in the 1990s and draws new boundaries reflecting those changes. It is based on a telephone survey of 762 local speakers, representing all the urbanized areas of North America. It has been developed by Bill Labov, one of the leading sociolinguists of the world, together with his colleagues Sharon Ash and Charles Boberg. The Atlas consists of a printed volume accompanied by an interactive CD-ROM. The print and multimedia content is also available online. Combined Edition: Book and Multimedia CD-ROM The book contains 23 chapters that re-define the geographic boundaries of North American dialects and trace the influence of gender, age, education, and city size on the progress of sound change; findings that show a dramatic and increasing divergence of English in North America; 139 four color maps that illustrate the regional distribution of phonological and phonetic variables across the North American continent; 120 four color vowel charts of individual speakers. The multimedia CD-ROM supplements the articles and maps by providing a data base with measurements of more than 100,000 vowels and mean values for 439 speakers; the Plotnik program for mapping each of the individual vowel systems; extended sound samples of all North American dialects; multimedia applications to enhance classroom presentations. Online Version: Book and CD-ROM content plus additional data The online version comprises the contents of the book and the multimedia CD-ROM along with additional data. It presents a wider selection of data, maps, and audio samples that will be recurrently updated; proffers simultaneous access to the information contained in the book and on the multimedia CD-ROM to all users in the university/library network; provides students with easy access to research material for classroom assignments. We share the experience of others through the stories they tell of the crucial events in their lives. This book provides a rich range of narratives that grip the reader's attention together with an analysis of how it is done. While remaining true to the facts, narrators use linguistic devices to present themselves in the best possible light and change the listener's perception of who is to blame for what has occurred. William Labov extends his widely used framework for narrative analysis to matters of greatest human concern: the danger of death, violence, premonitions and large-scale community conflicts. The book also examines traditional epic and historical texts, from Herodotus and the Old Testament to Macaulay, showing how these literary genres draw upon the techniques of personal narratives. Not only relevant to students of narratology, discourse and sociolinguistics, this book will be rewarding reading for anyone interested in the human condition.

This book considers how far social factors explain why human societies produce different kinds of language at different times and places and why some languages and dialects get simpler while others get more complex. It does so in the context of a wide range of languages and societies.
