The classic work that redefined the sociology of knowledge and has inspired a generation of philosophers and thinkers In this seminal book, Peter L. Berger and Thomas Luckmann examine how knowledge forms and how it is preserved and altered within a society. Unlike earlier theorists and philosophers, Berger and Luckmann go beyond intellectual history and focus on commonsense, everyday knowledge—the proverbs, morals, values, and beliefs shared among ordinary people. When first published in 1966, this systematic, theoretical treatise introduced the term social construction, effectively creating a new thought and transforming Western philosophy.

Using a variety of examples from everyday experience and from existing research in areas such as personality, sexuality and health, it clearly explains the basic theoretical assumptions of social constructionism. Key debates, such as the nature and status of knowledge, truth, reality and the self are given in-depth analysis in an accessible style. Drawing on a range of empirical studies, the book clearly defines the various different approaches to social constructionist research and explores the theoretical and practical issues involved. While the text is broadly sympathetic to social constructionism, it also adopts a critical perspective to the material, addressing its weaknesses and, in the final

This volume grew out of a discussion between the editors at the Society for Experimental Social Psychology meeting in Nashville in 1981. For many years the Society has played a leading role in encouraging rigorous and sophisticated research. Yet, our discussion that day was occupied with what seemed a major problem with this finely honed tradition; namely, it was preoccupied with "accurate renderings of reality," while generally insensitive to the process by which such renderings are achieved. This tradition presumed that there were "brute facts" to be discovered about human interaction, with little consideration of the social processes through which "factuality" is

established. To what degree are accounts of persons constrained by the social process of rendering as opposed to the features of those under scrutiny? This concern with the social process by which persons are constructed was hardly ours alone. In fact, within recent years such concerns have been voiced with steadily increasing clarity across a variety of disciplines. Ethno methodologists were among the first in the social sciences to puncture the taken-for-granted realities of life. Many sociologists of science have also turned their attention to the way social organizations of scientists create the facts necessary to sustain these organizations. Historians of science have entered a similar enterprise in elucidating the social, economic and ideological conditions enabling certain formulations to flourish in the sciences while others are suppressed. Many social anthropologists have also

An anniversary edition of an influential book that introduced a groundbreaking approach to the study of science, technology, and society. This pioneering book, first published in 1987, launched the new field of social studies of technology. It introduced a method of inquiry—social construction of technology, or SCOT—that became a key part of the wider discipline of science and technology studies. The book helped the MIT Press shape its STS list and inspired the Inside

Technology series. The thirteen essays in the book tell stories about such varied technologies as thirteenth-century galleys, eighteenth-century cooking stoves, and twentieth-century missile systems. Taken together, they affirm the fruitfulness of an approach to the study of technology that gives equal weight to technical, social, economic, and political questions, and they demonstrate the illuminating effects of the integration of empirics and theory. The approaches in this volume—collectively called SCOT (after the volume's title) have since broadened their scope, and twenty-five years after the publication of this book, it is difficult to think of a technology that has not been studied from a SCOT perspective and impossible to think of a technology that cannot be studied that way.

of social construction is the question of what, precisely, is being constructed. Facts, gender, quarks, reality? Is it a person? An object? An idea? A theory? Each entails a different notion of social construction, Ian Hacking reminds us. His book explores an array of examples to reveal the deep issues underlying contentious accounts of reality. Especially troublesome in this dispute is the status of the natural sciences, and this is where Hacking finds some of his most telling cases, from the conflict between biological and social approaches to mental illness to vying accounts of current research in sedimentary geology. He looks at the issue of child abuse—very much a reality, though the idea of child abuse is a social product. He also cautiously examines the ways in which advanced research on new weapons influences not the content but the form of science. In conclusion, Hacking comments on the

construction of race and ethnicity in the United States. It offers an in-depth and eye-opening analysis of (a) the power of racial classification to shape our understanding of race and race relations, (b) the way in which the system came into being and remains, and (c) the real consequences this system has on life chances. The readings deal with five major themes: the personal experience of classification schemes; classifying people by race; ethnic classification; the persistence, functions, and consequences of social classification; and a new paradigm: transcending categories. For individuals who want to gain a fuller understanding of the impact the ideas of race has on a society that is consumed by it.

Drawing on postmodern philosophies and critical, social, and literary theories, social construction has become an important and influential framework for practice and research within social work and related fields. Embracing inclusivity and multiplicity, social construction provides a framework for knowledge and practice that is particularly congruent with social work values and aims. In this accessible collection, Stanley L Witkin showcases the innovative ways in which social construction may be understood and expressed in practice. He calls on experienced practitioner-scholars to share their personal accounts of interpreting and applying social constructionist ideas in different settings (such as child welfare agencies, schools, and the courts) and with diverse clientele (such as "resistant" adolescents, disadvantaged families,
